

Wood Working Machine

Bamboo Chain Splitter Machine

- Our Bamboo Chain Splitter Machine is designed to split bamboo into the required number of segments.
- The machine is capable to split a bamboo of diameter 200 MM or 8 inches. It uses various grills to do the operation.
- The grill has parallel blades, which split the bamboo two numbers of segments with nearly parallel edges. Grills with "Zero" centre can be used to split a nearly solid bamboo.

Maximum length for splitting	Max. up to 4'
Maximum Dia for splitting	200 MM
Dimensions of the machine	6' x 2' x 4'
Approx. weight, in kg	300 KG
Power Consumption	3 H.P.

Maximum length for splitting	Max. up to 4'
Maximum Dia for splitting	200 MM
Dimensions of the machine	8' x 2' x 4'
Approx. weight, in kg	500 KG
Power Consumption	5 H.P.
Purpose	In comparison of Hand Splitter

Stick Sizing Machine

- Our Bamboo Stick Sizing Machine is designed to cut the bamboo sticks into the required length.
- The sticks coming out of the stick making machine are required to be cut to various lengths depending upon the final product to be made.
- Due to low vibrations the sticks are cut with a very good finish and hence a good production rate.
- The machine uses a Carbide Tipped Circular Saw to cut the sticks.

Maximum diameter of stick bundle	100 MM
Approx. Dimensions of the machine	3' x 3½' x 3½'
Approx. weight, in kilograms	200 kg
Power Consumption	2 H.P. 1440 RPM
Labour Requirement	Unskilled
Carbide Cutter used	14"
